Theme 1: National Monitoring Evaluation and Reporting

NERP Theme 1 team and collaborators

Canberra, 22nd August 2012

MARINE BIODIVERSITY *hub*

Presentation summary

- Theme 1 objectives and milestones for 2012
- Progress to date
 - Project 1: Collation and analysis of existing data sets
 - Project 2: Analysis of approaches for monitoring biodiversity
- Spin-offs and ancillary products
- Issues and solutions so far

Theme 1: Summary

Theme vision

This theme will contribute towards two blue-prints:

- 1 a sustained national environmental monitoring strategy designed to evaluate marine ecosystem health, and:
- 2 a sustained monitoring strategy to help manage the Commonwealth Marine Reserve Network, focussing on the Southeast Marine Region.

- Theme divided into 2 projects
 - Project 1: Collation and analysis of existing data sets, NERP: \$1,194,184, Non-NERP/In-Kind: \$1,582,952
 - Project 2: Analysis of approaches for monitoring biodiversity in Commonwealth waters, NERP: \$1,744,224, Non-NERP/In-Kind: \$2,345,935

Theme 1: Milestones (AWP 2012)

Project	Milestone	Due date	Status
1 & 2	Meeting with SEWPaC to finalise science plans	31/03/12	Not started
2	Flinders CMR: Survey design (and power analysis)	30/06/12	Completed
2	Solitary islands: Survey design (and power analysis)	30/08/12	Completed
2	Flinders CMR: Field work	31/11/12	Completed
2	Solitary islands: Field work	31/11/12	Completed
1	Catalogue of existing data sources and their relevance to KEFs and/or CMRs in the south east marine planning region	31/11/12	On-going
1	Development and where possible application of new and existing statistical models for multivariate trend and change point detection	31/11/12	On-going
1 & 2	Annual report write up and draft presentation to SEWPaC	31/11/12	On-going
1	Identification and prioritisation of key data gaps for a sustained national marine environmental monitoring strategy and SE CMR network management strategy	31/03/14	On-going
2	Houtman-Abrolhos islands: Survey design (and power analysis)	30/04/13	Not started
2	Houtman Abrolhos islands: Field work	31/11/13	Not started
1	Data analysis and provision in format suitable for SoE 2016 contingent of extant data sources	31/08/14	On-going
1 & 2	Final annual report	31/11/14	Not started

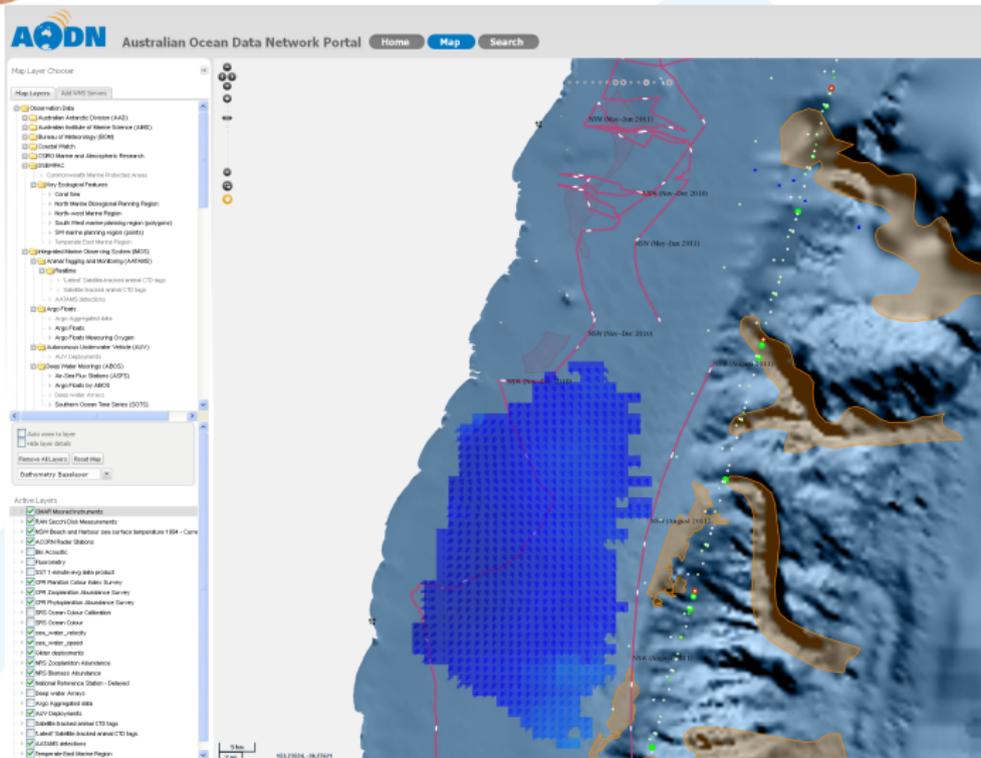

Project 1: Data catalogue

- Project 1 aims *inter alia* to source and analyse data sets to invalidate KEF predictions and identify gaps for CMR management
- Data discovery and accessibility a major stumbling point
 - 100's - 1000's data sets currently not visible
 - each new project spends considerable resources 'discovering' data
- Solution lies with IMOS/AODN
 - encouraging greater participation particularly for biological data
 - working on simple meta-data template (with Theme 2)
 - KEF and CMR shape files on AODN portal helps identify overlap

Project 1: Solitary Islands data

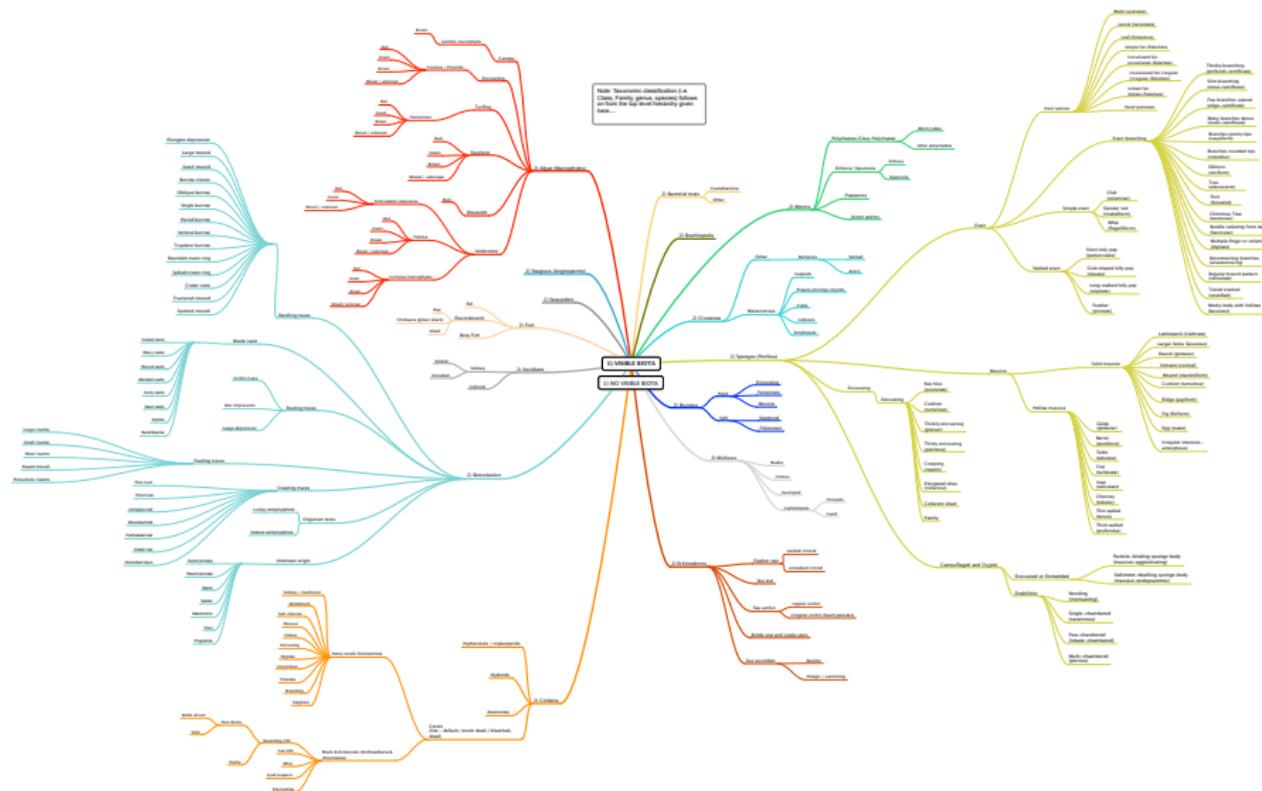

Project 1: Methods catalogue

- Methods catalogue
 - How to identify trends and change points in time series
 - Many methods with different sensitivity to number of observations and distributional assumptions
- Quick taxonomy of methods
 - EDA - comparison of plots, ordination analysis
 - Non-parametric tests - at least 8 tests in the literature
 - Parametric models - GLMs, GLMMs, MAR(1), SEMs, ...
 - State space models - linear and non-linear
 - Statistical process control

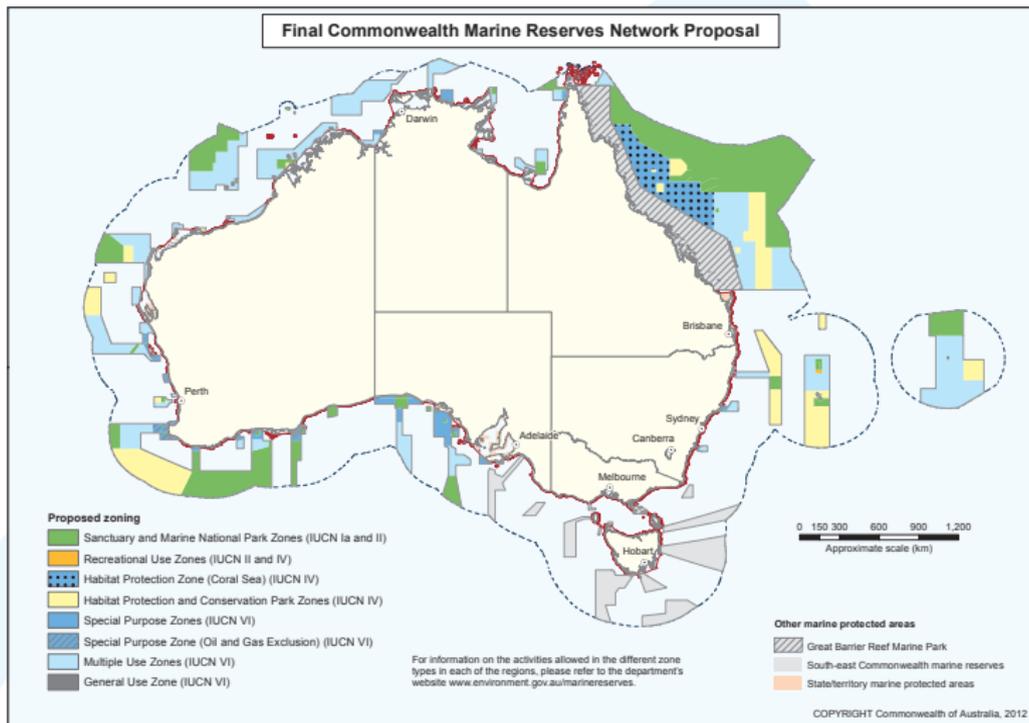

Project 1: CATAMI standard

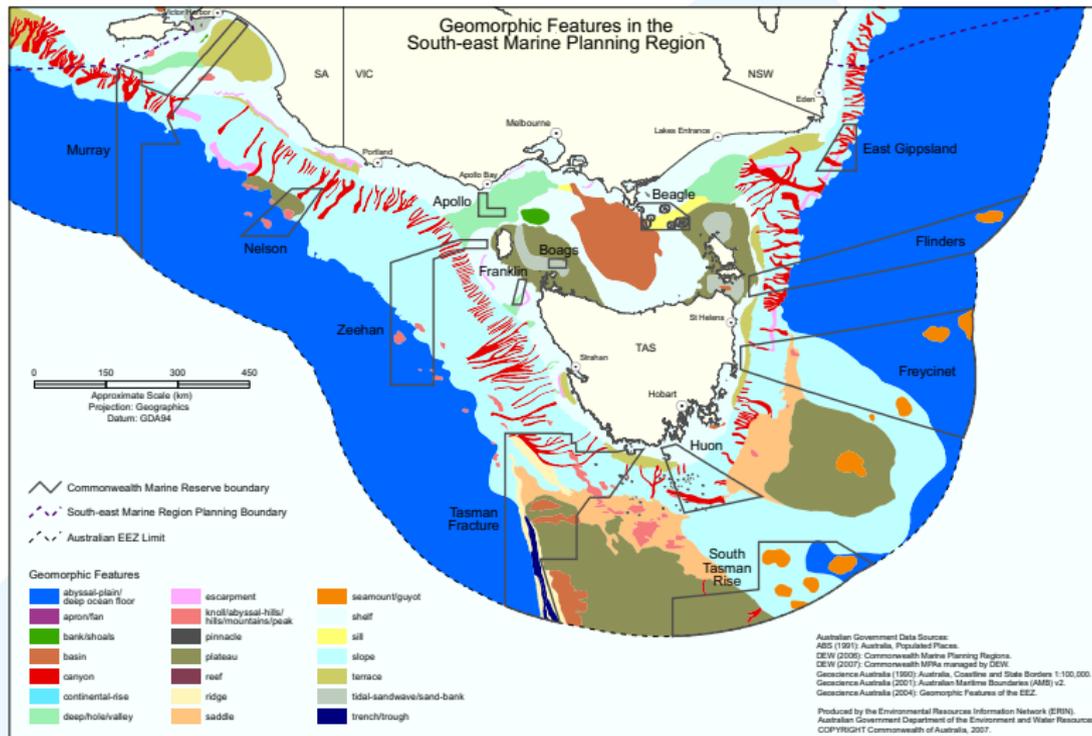

Project 2: Proposed CMR estate

Project 2: SE CMR estate

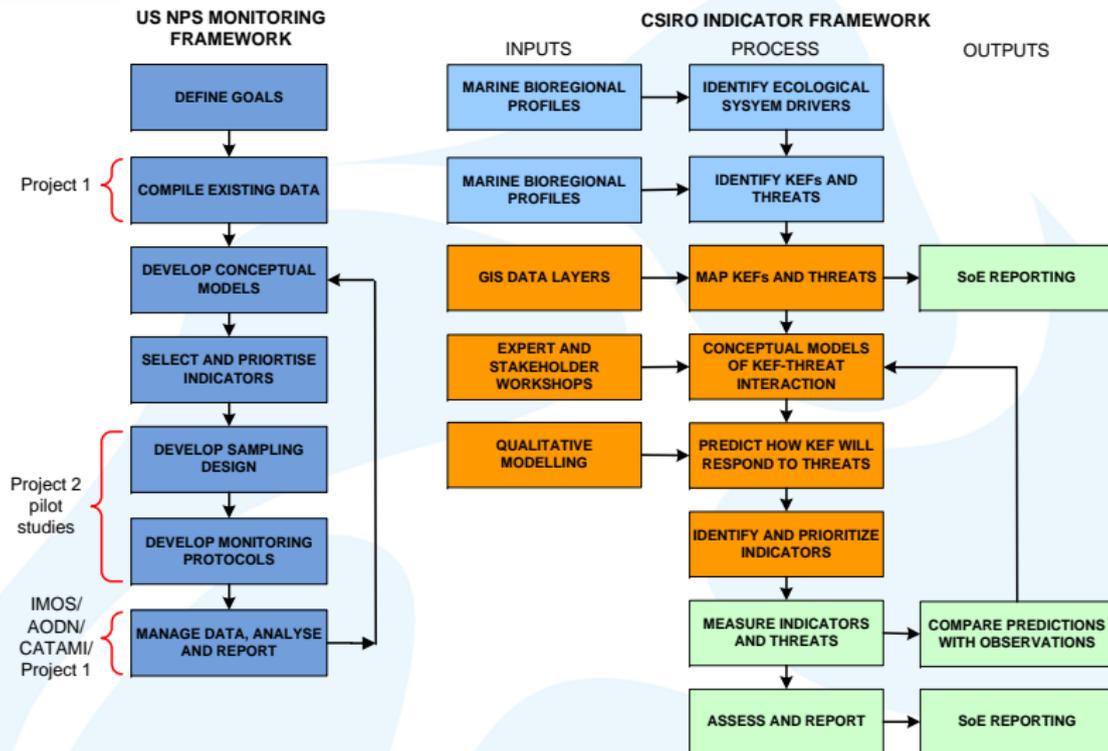

Project 2: National KEFs

Project 2: MER frameworks

Project 2: Monitoring

- Survey design and monitoring protocols
 - Critical components of a MER framework
 - Size of CMR estate (and paucity of data) = significant challenge
 - Many new observation platforms = challenge and opportunity
- Project 2 objectives
 - Survey design and power
 - Cost and logistical feasibility
 - Pilot studies: Flinders CMR, Solitary Islands, Houtman-Abrolhos Islands

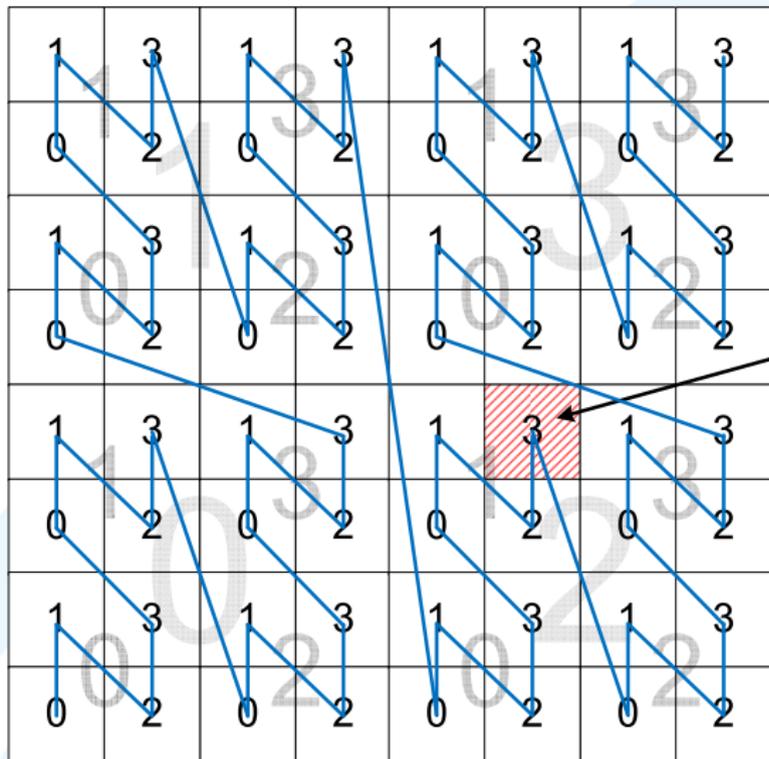

Project 2: GRTS

- Generalised Random Tessellation Stratified (GRTS) design
 - Core recommendation for national blueprint
 - Employed by US National Parks Service and Environmental Protection Agency (amongst others)
- Long list of advantages
 - Works for finite, linear, and areal resources
 - Spatially balanced - uncovers pattern in observations
 - Consecutive sub-sequence of the full sample retains spatial balance
 - Inclusion probability can be \propto to any positive ancillary variable
 - Good variance properties under sampling constraints (e.g. site inaccessible)

GRTS: 3L quadrant recursive partition

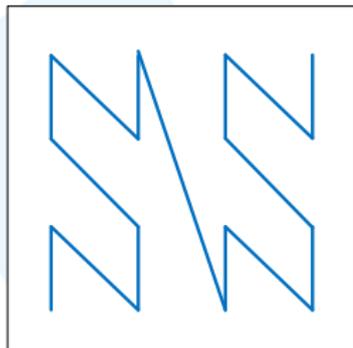

'.213'

GRTS: 2L hierarchical random order

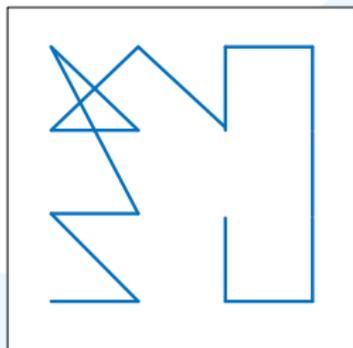

6	8	14	16
5	7	13	15
2	4	10	12
1	3	9	11

Non-random
order

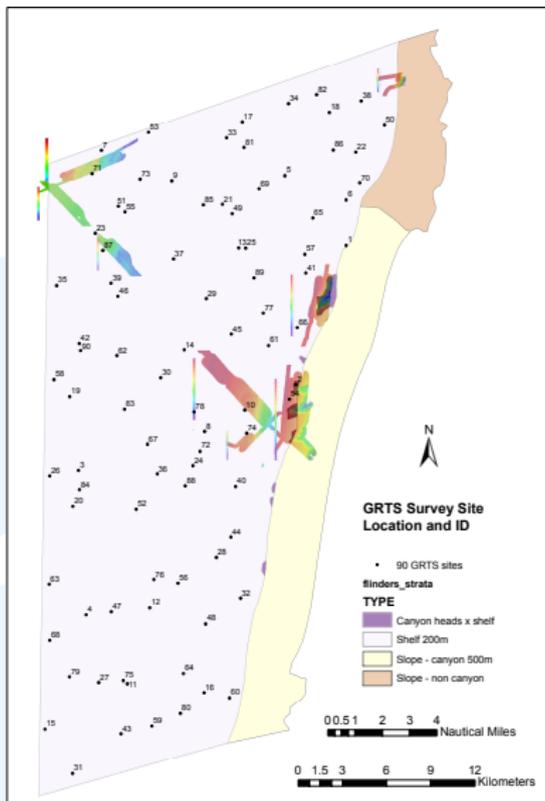

12	9	7	6
10	11	8	5
14	13	1	4
16	15	2	3

Hierarchical
random order

Flinders CMR: 90 GRTS shelf sites

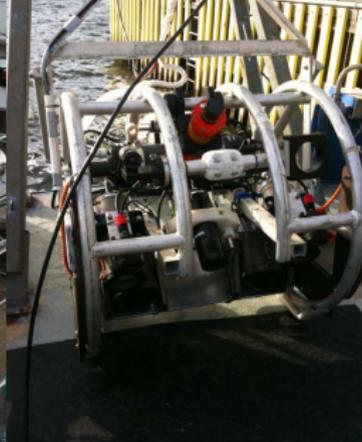

Flinders pilot: objectives

- Flinders CMR pilot survey objectives for slope and shelf:
 - Develop and trial GRTS design to characterise habitat
 - Deploy, retrieve and analyse data for a suite of non-destructive survey methods
 - Demonstrate applicability and constraints relative to SEWPaC objectives
- Conservation values objectives for the CMR
 - Yet to be fully operationalized (Theme 2)
 - Have begun with:
 - 1 low productivity, highly impacted species
 - 2 commercially important fish species
 - 3 invertebrate mega-benthos

Flinders pilot: Survey equipment

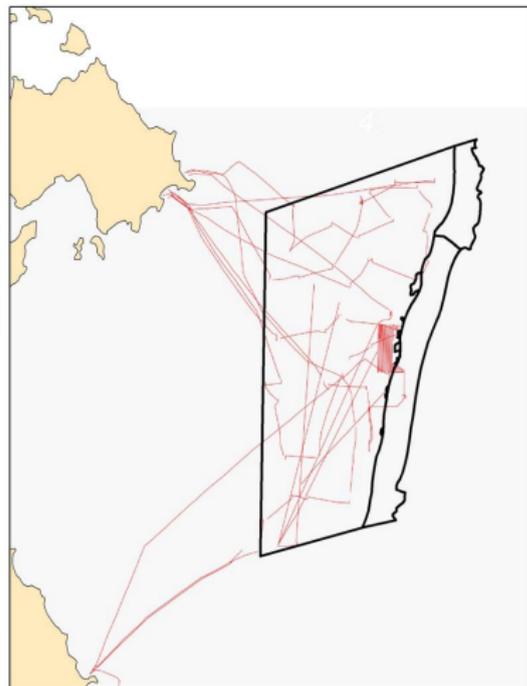

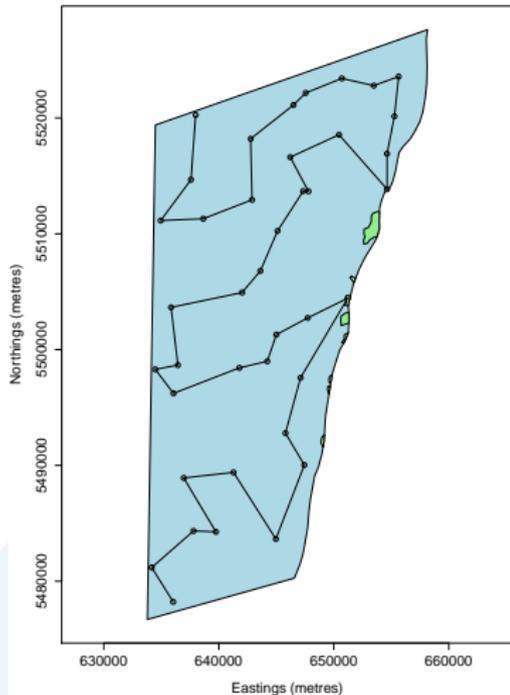

Flinders pilot: Phase 1 outcomes

- Phase 1 outcomes:
 - 40 drop camera samples to GRTS design
 - Swath map between GRTS sample locations
 - Continuous swath map of $\sim 30\text{kms}^2$
 - Sediment grab at 31 stations
- Constraints relate to:
 - Significant transit distances
 - Vessel unable to work through the night
 - Objectives and conceptual models

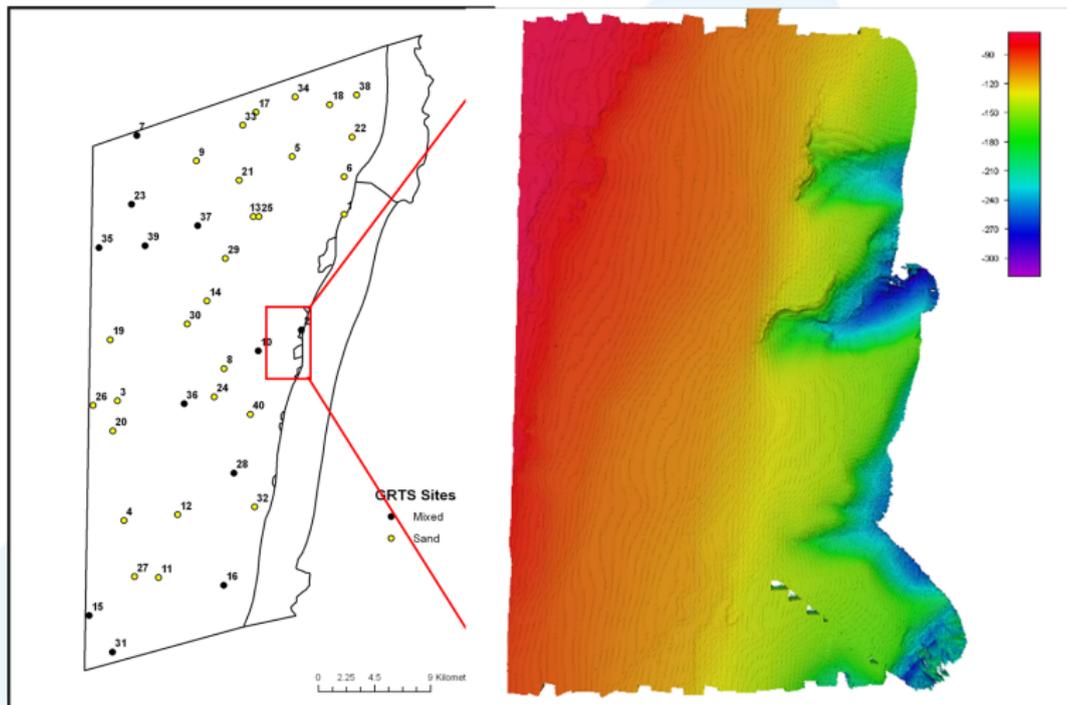

Flinders pilot: Phase 1 outcomes

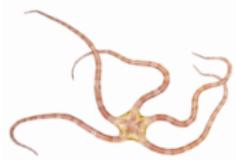

Path for 40 sites

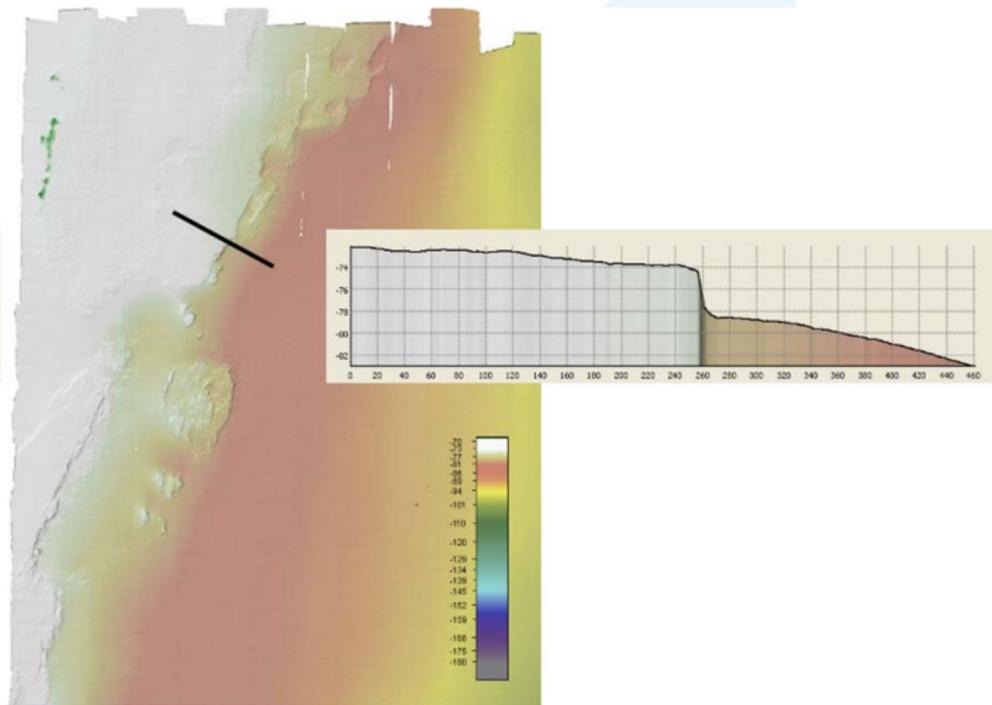

Flinders pilot: Phase 1 outcomes

Flinders pilot: Phase 1 outcomes

Flinders pilot: Drop camera @ 35

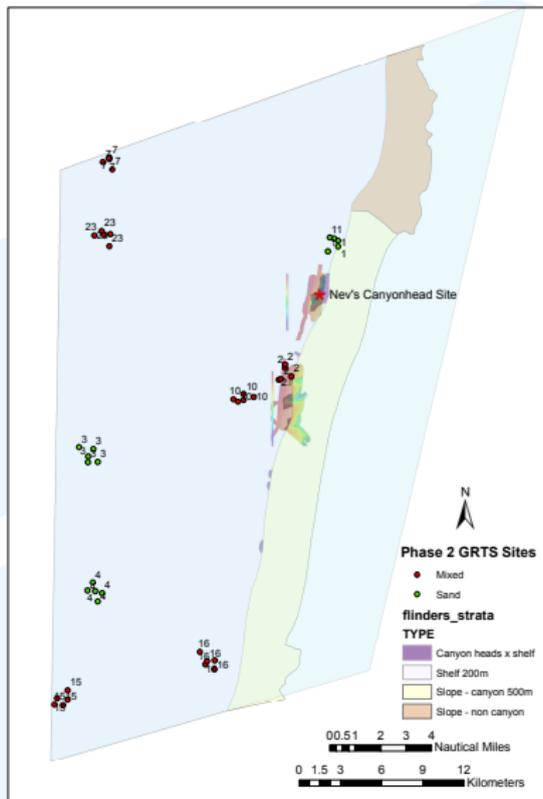

Flinders pilot: Phase 2 summary

- Phase 2 outcomes (CMR):
 - Shallow water BRUVs (sets of 5) and STV tows (sets of 2) at 13 shelf and canyon head sites
 - Deep water BRUVs at two slope sites
 - STV slope transects at 8 GRTS-based start points
- Phase 2 outcomes (CBC and CC):
 - Deep water BRUVs at two slope sites
 - STV slope transects at 4 GRTS-based start points
 - STV slope transects at 2 selected points

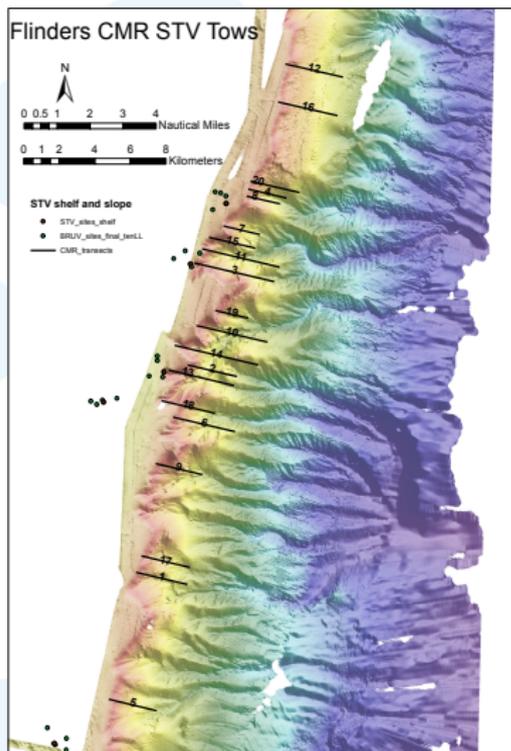

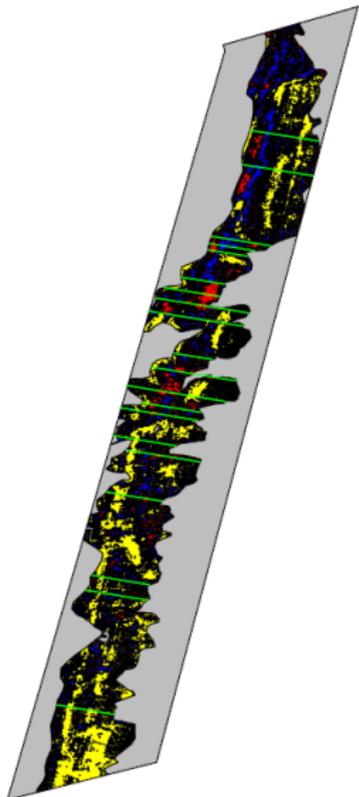

Flinders pilot: Phase 2 shelf sites

Flinders pilot: Phase 2 slope transects

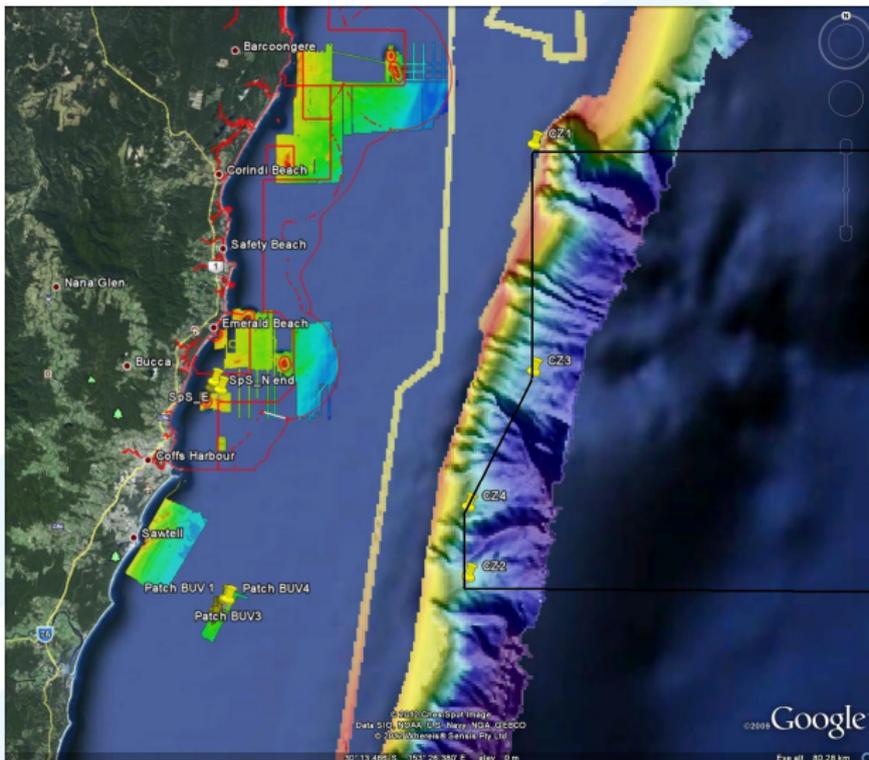

Flinders pilot: BRUV @ 23

Flinders pilot: BRUV @ 10

SI pilot: Context

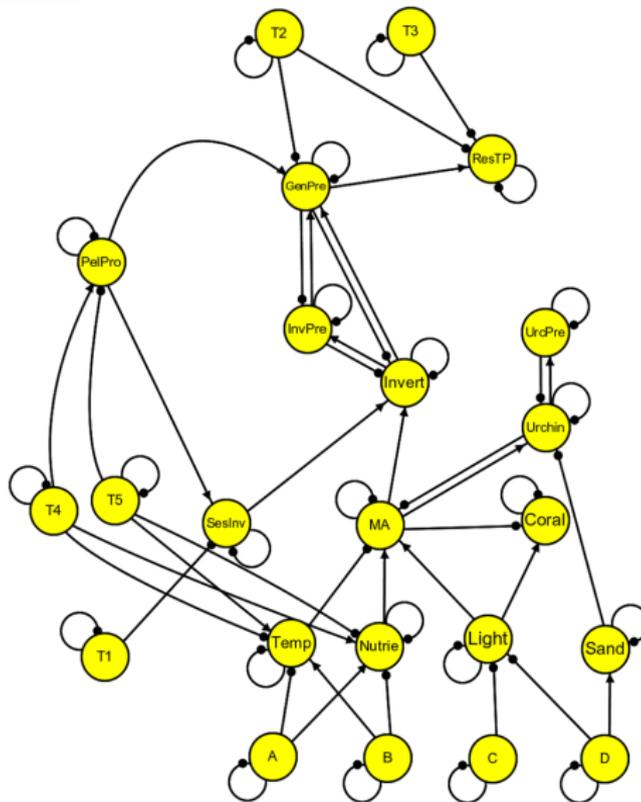

SI pilot: Objectives

- Objectives of Solitary islands pilot
 - deploy, retrieve and analyse data from a suite of non-destructive survey methods in the KEF
 - compare AUV and STV deployment - "dense-broad grid" v GRTS
 - autocorrelation with BRUVs
 - demonstrate applicability and constraints relative to KEF objectives
- Qualitative model predictions
 - well developed conceptual models for four habitat types
 - methods to invalidate KEF model predictions

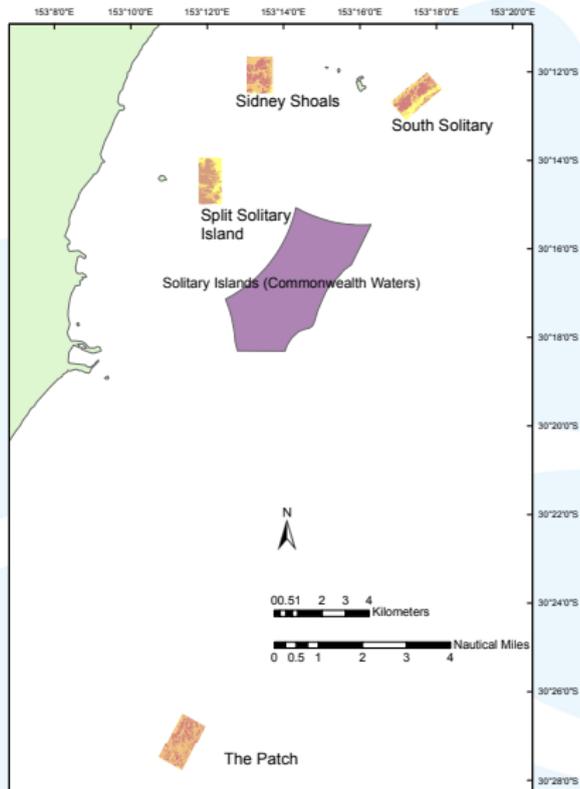

SI pilot: Conceptual model

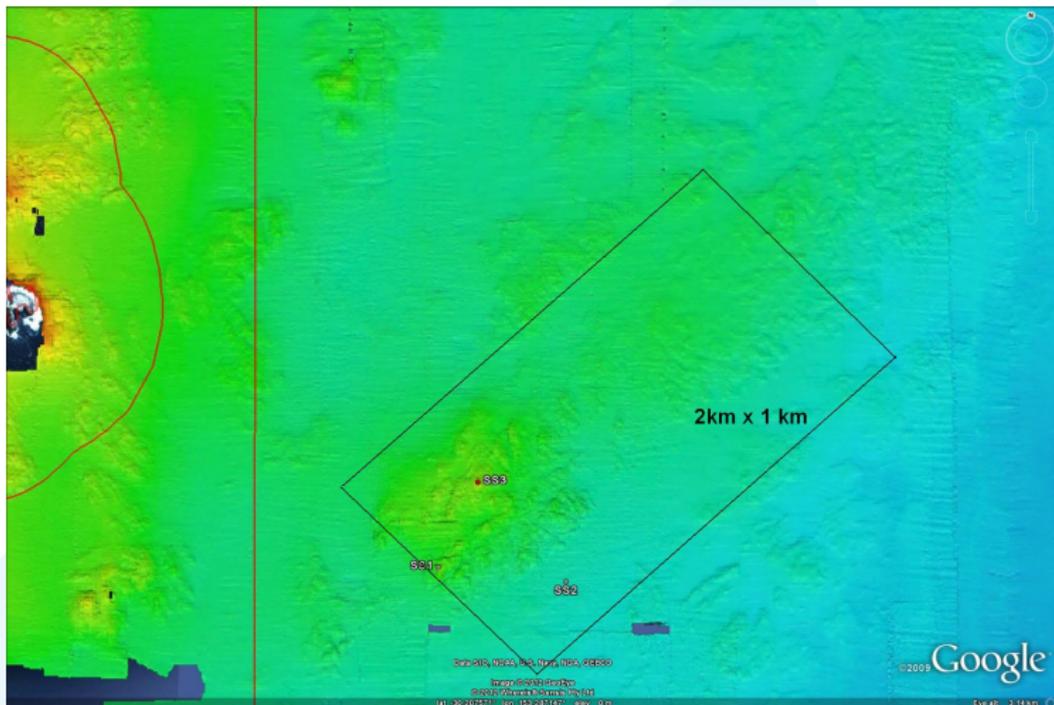

SI pilot: survey sites

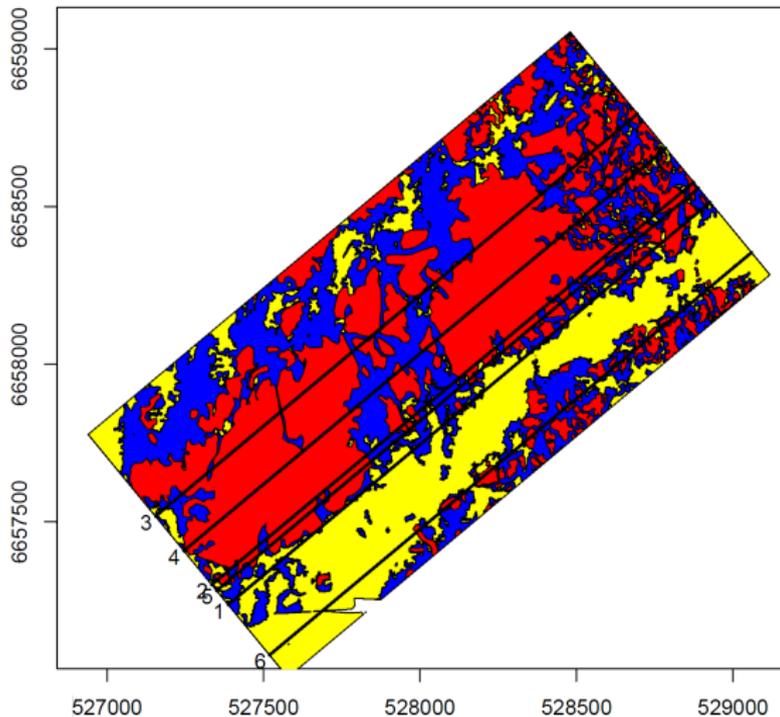

South Solitary: survey frame

South Solitary: GRTS transects

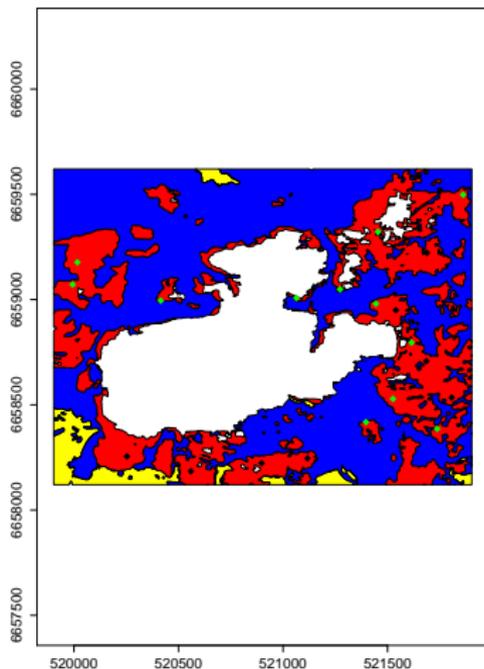

SI pilot: Outcomes

- Solitary islands pilot outcomes
 - 4 STV transects in each of 4 KEF survey locations
 - BRUVs (sets of 4) in each of the 4 KEF survey locations
 - 20 BRUVs in autocorrelation experiment
 - AUV with forward oblique looking SV this week
 - Continuous swath map of $\sim 30\text{kms}^2$ weather delayed
- Constraints relate to
 - weather
 - precise location of BRUVs
 - mechanical failures

40 Acres: GRTS BRUV design

Houtman-Abrolhos Islands: Context

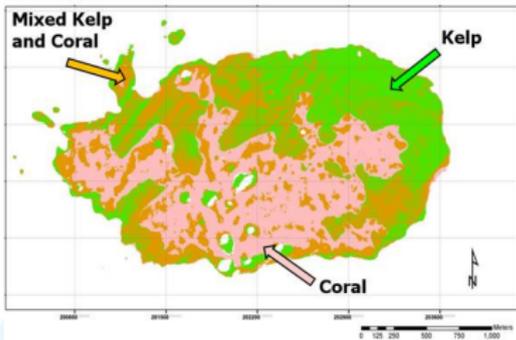

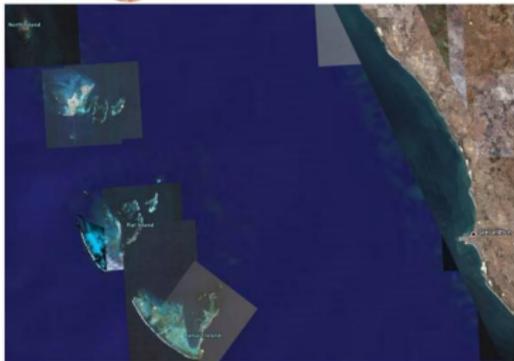

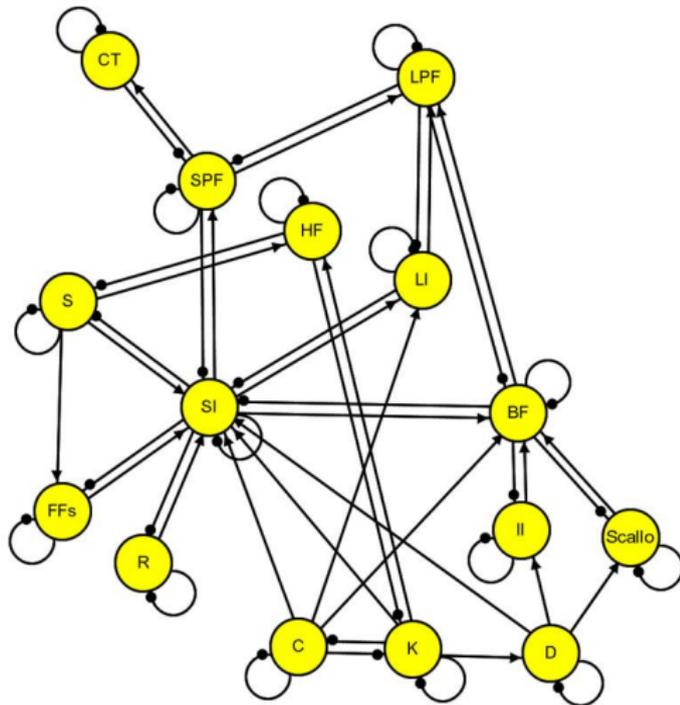

Image courtesy of Marine Futures, UWA

HA Islands: Summary

- Objectives for HA island pilot
 - Not fully determined yet
 - Western (boundary current) comparison for Solitary Islands
 - KEF conceptual model invalidation
 - leverage of existing AUV and WA fisheries monitoring
- Potential issues
 - KEF lies wholly within state waters
 - Paucity of data in commonwealth waters
 - KEF conceptual model invalidation
